TTB Releases New Distilled Spirits Proofing Videos

If you are a distilled spirits plant proprietor, it is important that you know how to proof your spirits correctly. To help correctly determine the proof of your distilled spirits, we are pleased to offer our first TTB video series!

The [TTB Proofing Video Series](#) is a set of five short, instructional videos that will guide you, step-by-step, through several frequently used proofing procedures. The videos include close-ups of techniques and processes, and explain why it is important to correctly follow all of the steps involved in proofing spirits. Our new videos are:

- Introduction to Proofing
- Proofing Spirits with a Hydrometer
- Proofing Spirits with a Densitometer
- Distilling Spirits for Proofing
- Determining Proof Obscuration by Evaporation.

To determine which videos best apply to you and the proofing process you plan to use, please watch the introductory video. We recommend you watch all the videos in order.

Ready to watch? Visit the [Distilled Spirits - Frequently Used Proofing Processes](#) page at TTB.gov.

Please [contact us](#) if you have any questions or comments about the videos, or if you encounter any technical issues.
